Windows XP

Problem: "Cannot find path..." or "Wrong folder?????..." error messages when launching applications ??????

Description: You may encounter an issue where Windows XP presents the error message "Cannot find path..." or "Wrong folder..." when attempting to open certain applications. ?????? For instance, the following error message: ?????? C:\Program Files\m Files\can ??????

may be generated. ?????? Fixes: This issue can sometimes be resolved by opening the Windows Registry via the following steps:

Press the "Start" button and go to "Run" Type "regedit" and click OK. Now scroll down to the key labeled: ??????  
[HKEY\_CLASSES\_ROOT\exefile\shell\open\command]

in the right pane, the Default value must be "%1" %\*

After changing this setting, try launching your problematic application(s) again.
