Objective

To create a technology landscape report on **Gut Biology and Probiotic microorganisms in food**

- Identify market players with prolific IP activity in the technology area
- Segment the players by the industry they belong to

Note: *This report is just a template and gives an indication of what the paid report contains.*

Background

Definition

Etymologically, the term probiotic appears to be a composite of the Latin preposition **pro** ("for") and the Greek adjective ???????? (biotic), the latter deriving from the noun ????? (bios, "life"). Miller et al *British Journal of Nutrition*, 2003 Lilly and Stillwell coined the term probiotic in 1965 and defined it as "a substance produced by one microorganism stimulating the growth of another microorganism" and understood a probiotic as opposite to an antibiotic. Rusch 2002 Over the course of time various definitions of probiotics have surfaced and the internationally adopted FAO/WHO definition was coined in 2001 which describes probiotics as

"Live microorganisms which when administered in adequate amounts confer a health benefit on the host" [FAO report 2002](#)

The International Study Group on New Antimicrobial Strategies (ISGNAS), developed a concept for the detailed definition of probiotics in three categories.

1. Medical probiotics (drugs) - a microbial preparation which contains live and/or dead microorganisms including their components and products determined to be employed as a drug for therapeutic purposes.

2. Pharmaceutical probiotics (food supplements) - a microbial preparation designed for manufacture of food supplements.

3. Alimentary probiotics (food) - a microbial preparation designed for use in food fermentation or food production. The mode of action includes immunomodulation, host microflora modulation, and the modulation of metabolic processes. [Rusch 2002](#)

Science behind probiotics

An organism may be classified as a probiotic (in human beings) based on the following criteria.

Therapeutical use of probiotic formulations in clinical practice [T.Lannitti et al Clinical Nutrition Journal, 2010](#)

Of the probiotic microbes, the genera *Bifidobacter* and *Lactobacillus* are very prevalent. They restore the normal intestinal microflora after antibiotic treatment, produce digestive enzymes, improves food digestibility, suppresses food-borne pathogens.

Probiotics as food

Probiotics essentially work by helping to maintain and replenish these colonies of beneficial bacteria. They can be ingested through a variety of means, including daily capsules, yogurt shots, or enhanced dairy products. Capsules of probiotics are similar to capsules of any nutrient, and contain live bacteria within an easily digestible shell. Small yogurt shots, which contain less than one ounce of yogurt infused with high numbers of probiotics, can be taken once a day instead of the capsule. Significant numbers of probiotics have also become included in many types of milk, cheeses, and yogurts to help keep numbers of gut flora high. [Probiotic effects ehow.com](#)

Health benefits of probiotics

The world is full of microorganisms (including bacteria), and so are people's bodies -- in and on the skin, in the gut, and in other orifices. Friendly bacteria are vital to proper development of the immune system, to protection against microorganisms that could cause disease, and to the digestion and absorption of food and nutrients. Each person's mix of bacteria varies. Interactions between a person and the microorganisms in his body, and among the microorganisms themselves, can be crucial to the person's health and well-being.

This bacterial "balancing act" can be thrown off in two major ways:

1. By antibiotics, when they kill friendly bacteria in the gut along with unfriendly bacteria. Some people use probiotics to try to offset side effects from antibiotics like gas, cramping, or diarrhea. Similarly, some use them to ease symptoms of lactose intolerance -- a condition in which the gut lacks the enzyme needed to digest significant amounts of the major sugar in milk, and which also causes gastrointestinal symptoms.
2. "Unfriendly" microorganisms such as disease-causing bacteria, yeasts, fungi, and parasites can also upset the balance. Researchers are exploring whether probiotics could halt these unfriendly agents in the first place and/or suppress their growth and activity in conditions like:

- Infectious diarrhea
- Irritable bowel syndrome
- Inflammatory bowel disease (e.g., ulcerative colitis and Crohn's disease)
- Infection with *Helicobacter pylori* (*H. pylori*), a bacterium that causes most ulcers and many types of chronic stomach inflammation
- Tooth decay and periodontal disease
- Vaginal infections
- Stomach and respiratory infections that children acquire in daycare
- Skin infections
- Tumours [Probiotics medicinenet.com](#)

Probiotics contribute to well-being in various ways as shown in the figure

- An indicative list of terms to show how a concept table is generated. View paid report for complete list.
- Concept Table was enriched by searches related to gut biology and probiotics in food from pubmed mesh, relevant patents, scientific articles and various thesauri

Class code definitions

US CLASSES

424	Drug, bio-affecting and body treating compositions	
	424/93.1	Whole live micro-organism, cell, or virus containing

IPC CLASSES

A	Human Necessities			
	A01	Agriculture; Forestry; Animal husbandry; Hunting; Trapping; Fishing		
		A01N	Preservation of bodies of humans or animals or plants or parts thereof; Biocides, e.g. as disinfectants, as pesticides or as herbicides; Pest repellants or attractants; Plant growth regulators	
			A01N 63/00	Biocides, pest repellants or attractants, or plant growth regulators containing micro-organisms, viruses, microbial fungi, animals, e.g. nematodes, or substances produced by, or obtained from micro-organisms, viruses, microbial fungi or animals, e.g. enzymes or fermentates

F-terms

Theme	Theme definition	F-term	F-term definition
4B001	Dairy products	AC31	Materials=>Lactic acid bacteria
		AC50	Materials=>Use of bifids (i.e., Lactobacillus bifidus bacteria)

Relevant patents (Sample Set)

S.No	Publication No	Title	Abstract	Date of patent	Inventors	Assignee
1	US20070286888	Additive For Feeds And Feed Containing The Same	An additive for feeds is provided which is efficacious in preventing and ameliorating digestive disorders such as diarrhea occurring as the side effects of the administration of antibiotics and a feed containing same. More specifically, an additive for feeds which comprises (A) Lactobacillus equi cells and (B) cells of at least one bacterium selected from the group consisting of Lactobacillus salivarius, Lactobacillus crispatus and Lactobacillus johnsonii.	13-Dec-07	Kado; Yukiko ; Morotomi; Masami.	Kabushiki Kaisha Yakult Honsha
2	US7906112	Canine probiotic Lactobacilli	According to the invention there is provided a strain of lactic acid bacteria of the genus Lactobacilli obtainable by isolation from resected and washed canine gastrointestinal tract having a probiotic activity in animals. Methods of use and compositions comprising the Lactobacilli of the present invention are also provided.	3-Sep-03	Reid; Gregor, Bruce; Andrew W. , Han; Victor	Urex Biotech, Inc.
3	US7288245	Composition having immunoregulating activities	The invention provides a composition comprising novel lactic acid bacteria having immunoregulating activities. Specifically, the invention provides food, drinks or medicaments containing novel lactic acid bacteria separated from "Shibazuke," one kind of traditional Kyoto pickles, and having immunoregulating activities. The lactic acid bacteria belong to Lactobacillus pentosus and have a weak assimilating activity or no assimilating activity for glycerol.	30-Oct-07	Nonaka; Yuji, Izumo; Takayuki, Iida; Keiko	Suntory Limited
4	US20060121015	Probiotic bifidobacterium strains	A Bifidobacterium strain, AH208, AH209, AH210, AH211, AH212 or AH214 or mutants or variants thereof are useful in the prophylaxis and/or treatment of inflammatory activity especially undesirable gastrointestinal inflammatory activity, such as inflammatory bowel disease or irritable bowel syndrome.	8-Jun-06	Collins; John Kevin; O'Sullivan; Gerald Christopher; O'Mahony; Liam; Shanahan; Fergus; Kiely; Barry	Alimentary Health Limited

EP1930018A1
Strains of probiotic lactobacilli that persist in the intestine and modulate its mucosal receptors

Priority Date (y-m-d): 2006-12-06
 First Inventor: ELLI MARINA IT

US Class (primary): Not available
 IPC Class (primary): A61K03574

Abstract:
 Disclosed are strains of Lactobacillus crispatus able to stimulate the host immune system by producing hydrogen peroxide and consequently modulating receptor PPAR-γ.

Claims:

1. Strains of Lactobacillus crispatus able to stimulate the host immune system by producing hydrogen peroxide and consequently modulating receptor PPAR-γ.
2. Strain as claimed in claim 1, deposited under access number LMG P-23257 at the BCCM/LMG Bacteria Collection, Laboratorium voor Microbiologie, Ghent University, Coupure links 953, B-9000 Ghent, Belgium.
3. Probiotic compositions comprising one of the strains claimed in claim 1 or 2.
